

DATA 505: Lab 2

Getting to know data frames

2025-09-02

Table of contents

1	Setup & Goals	1
2	Task 1: Reading data into R	1

1 Setup & Goals

Just like in [Lab 1](#), you will edit a `.qmd` Quarto script, render the result to a PDF, and submit both on Moodle (if you do not succeed at rendering the PDF, still submit the `.qmd` script: you may still get full “satisfactory” credit if you have made a reasonable effort).

Goals for Lab 2: - Learn to read data into R from a text (comma-separated values, `.csv`) file
- Reinforce concepts from [this week’s lecture](#) about types and classes of variables - Get some practice taking subsets of data frame objects

To do this, we will use the same dataset as in [Section 7](#) of our primary textbook

2 Task 1: Reading data into R

- The following code will download the `students.csv` dataset to your current working directory. You should leave this code unmodified:

```
download.file("https://andrew-bean.github.io/data505/labs/students.csv")
```
